

This is what our customers have to say about Kerio MailServer:

Hurd I/T Communications, VA, USA

"We have worked with numerous mail server packages and found Kerio to be an extremely robust and stable product. The quality control between server releases is unparalleled in today's industry. We normally recommend Microsoft Exchange Server Enterprise Edition – however when comparing feature for feature, price point, data recovery methods, and scalability, we found Kerio to be a superior product across the board. Our Enterprise Mail hosting solutions are powered by Kerio because of the superior management, disaster recovery, and scalability. Kerio redefines what a mail server should be."

James Hurd, President and CEO

Minooka Community High School, IL, USA

"As a tech director I demand only a few things: Easy implementation without sacrificing features, and stability. Kerio delivers this and more. Run, don't walk, to the world of Kerio."

Les Kern III, Directory of Technology

WickedZ, LLC, CO, USA

"Kerio MailServer has been the foundation for our tiered email solution for two years. Utilizing Linux for our email gateway with Kerio's integrated spam and virus protection has provided the level of protection required to maintain our business operations. In fact, we have been free of business impacting virus outbreaks since implementation. Thank You Kerio!"

Aaron Zieschang, Founder

Town of Provincetown, MA, USA

"Since the first day we installed Kerio MailServer we knew it was a winner. All you have to do is spend a few minutes watching those virus-laden emails hit the email engine and you have a real feeling of security and confidence. Since we installed Kerio MailServer, viruses have become a thing of the past. With new features addressing SPAM we have seen a dramatic drop in the number of spammers bothering our users. One thing we really like is, Kerio is a company large enough to provide us with world-class software while remaining focused on providing personal support. I like the fact that I'm a person at Kerio, not just another license number"

Gary Delius, Director of Information Systems

ingenuity, NY, USA

"We chose Kerio MailServer as a mailing hosting solution for our clients. We based our decision on stability, feature-set, and manageability. While we are primarily a Microsoft Exchange shop, Kerio offered us an excellent product with a very good price point. We could not be more pleased with our decision!"

Robert Anderson, Principal / Sr. Technical Consultant

Oregon Electric Group, OR, USA

"Kerio MailServer by far the best email solution I have used in my 15 years of Net Administration. It is easy to install, configure and manage! I am very pleased with the content filtering feature, as it has prevented numerous viruses from arriving in my users' inbox. This is a great value for the investment!"

Harlan Masters, Network Administrator

University of Pittsburg, PA, USA

"I can say that I am very pleased with Kerio MailServer. It was relatively easy to install and configure after a few technical glitches were worked out it functions beautifully. I especially like the built in WebMail service, the virus scanning, and SpamEliminator features. The manual is very well-written and the technical support is outstanding."

Gerard Apodaca, Ph.D.

Ellenville Central Schools, NY, USA

"At our school we began using WinRoute Firewall, so when Kerio introduced the web interface for Kerio MailServer we jumped right on board. Our teachers and staff find it intuitive to use. Aside from the simplicity of the products we used from Kerio, their tech support is the best. I can always get through to a tech, who 99 times out of 100 has the answer."

Vince Napoli, Director of Technology and Network Administration

Apple Canada, Inc., Ontario, Canada

"It is difficult to pick just one item I like the most about Kerio MailServer for Mac OS X as there are many aspects of the server which are excellent. If I have to pick just one I would say the easy control of the numerous mail and security features. Running a mail server in today's Internet environment can be a difficult task. For example, Administrators must worry about Open Relay, SPAM, and Viruses, just to name a few. Kerio MailServer allows me to easily customize the behavior of my server and monitor what is happening at all times. This allows me to provide a secure mail environment using standards-based Internet protocols for my users."

Steve Hellyer, Pre-Sales Consulting Engineer
